

ACTA DERMATO- VENEREOLOGICA

NEWSLETTER (July 2020)

New Editorial Manager

Agneta Andersson

As from August 1st, I am gradually reducing my role as the Editorial Manager of ActaDV and we have managed to find a successor who will take over more and more of my duties during this autumn. I sincerely welcome Therese Granlund and I am sure she will enjoy working with ActaDV as much as I have. I would like to thank all the editors, authors, reviewers and all other persons involved with ActaDV for all the good meetings (in real life as well as via e-mail and virtual meetings) during all these years. It has been a pleasure to be a part of ActaDV, but now it is time for me to spend some more time with my hobbies and I am very confident that Therese will take on the task with enthusiasm and contribute to the journal in the best possible way. With the valuable support from Anna-Maria Andersson and the rest of the staff at the editorial office I am sure she will succeed.

Therese Granlund

My name is Therese Granlund and I have been fortunate enough to work in academic publishing for over 15 years, seeing the industry transform and develop enormously during this time. Over the years I have worked primarily in editorial roles, but also with marketing, for two major academic publishers. My focus has always been on medical journals, covering a wide variety of topics, although my own academic background is in business and economics as well as sustainability. The majority of the journals that I have been responsible for are society owned, and during the last 5 years or so more and more focus has been put on Open Access publication. It is a great privilege to now join the team as Editorial Manager for ActaDV. I believe that we are strongly positioned at a time when more and more academic societies are expressing an interest in taking back control of their own publications, keeping academic publishing within the research community. I look forward to continuing the ActaDV tradition of wide and open dissemination of research, and the best possible service to researchers. Given how quickly academic publishing is currently developing I think that a focus on continuous improvement is important, and I look forward to supporting and guiding ActaDV into the future.

The new impact factor:

IF: 4.016

ActaDV has climbed from #13 to #7 in the ranking of dermato-venereological journals
Among the Open Access journals it is #1!

Articles published in July 2020 in Acta Dermato-Venereologica:

Editors' Choice of this month:

[Early Phase of Primary Melanoma Growth from the Patient Point of View: A Prospective Cross Sectional Study on Melanoma over 1 mm in Thickness](#)

Nausicaa Malissen, Safia Abed, Nicolas Macagno, Florent Amatore, Anderson Loundou, Florent Grange, Caroline Gaudy-Marqueste, Jean-Jacques Grob

Nausicaa Malissen

Comments by the authors:

We performed this study because most melanomas are diagnosed by the patients themselves or by their partners or relatives; they alone can describe its history.

We feel that this paper is very important due to the fact that it supports the consistency of patient's description of their primary melanoma and underlines the potential value of patient-reported kinetics as a criterion for medical decision, that could dynamically complement its objective pathological analysis, otherwise static at a single time point. Moreover, it provides some hints improving community education campaigns.
